The Legislative Council, which is composed of five Senators, six Representatives, and the presiding officers of the two houses, serves as a continuing research agency for the legislature through the maintenance of a trained staff. Between sessions, research activities are concentrated on the study of relatively broad problems formally proposed by legislators, and the publication and distribution of factual reports to aid in their solution.

During the sessions, the emphasis is on supplying legislators, on individual request, with personal memoranda, providing them with information needed to handle their own legislative problems. Reports and memoranda both give pertinent data in the form of facts, figures, arguments, and alternatives.

To Members of the Forty-sixth Colorado General Assembly:

In accordance with the provisions of House Joint Resolution No. 1024, 1965 regular session, the Legislative Council submits the accompanying report relating to interscholastic activities in the public schools of Colorado.

The committee appointed by the Legislative Council to conduct the study reported its findings and recommendations to the Council on November 28. At that time the report was adopted by the Legislative Council for transmission to the Forty-sixth General Assembly.

Respectfully submitted,

/s/ Senator Floyd Oliver

Denver, Colorado

Dear Mr. Chairman:

Your committee appointed to study interscholastic athletics and other activities in the public schools has completed its assignment and submits herewith its final report and recommendations.

The committee has not recommended any changes in state laws relating to activity programs but has urged local school boards to evaluate their own programs frequently and to follow the State Department of Education guidelines for activity accounting.

Respectfully submitted,

/s/ Representative C. P. Lamb, Chairman
Committee on Interscholastic
Activities

FOREWORD

The Legislative Council's Committee on Interscholastic Activities was created under the provisions of House Joint Resolution No. 1024, 1965 regular session, to study interscholastic athletics and other activities in the public schools of Colorado. Committee members included: Representative C. P. (Doc) Lamb, Chairman; Senator Edwin S. Lamm, vice chairman; Senators Andy Lucas and Vincent Massari; and Representatives Frank Anaya, Dominic Coloroso, Harrie Hart, John Mackie, Kenneth Monfort, Clarence Quinlan, and Hubert Safran.

The committee wishes to thank all the school superintendents and other school officials who spent many hours filling out the questionnaires which served as the basis of this study. Without their cooperation the committee would not have been able to gather the necessary information concerning interscholastic activities.

The committee and staff were aided in their endeavors by Mr. Glenn T. Wilson and Mr. Ray C. Ball of the Colorado High School Activities Association. Mr. Wilson, long-time Commissioner of the Association, retired early in 1966 and was succeeded by Mr. Ball. Several active members of the Association also met with the committee and assisted the staff in devising the questionnaire. Miss Clair Sippel, secretary of the Legislative Reference Office, and Miss Janet Wilson, senior research analyst from the Legislative Council's staff, also assisted the committee.

November, 1966

Lyle C. Kyle
Director

INTERSCHOLASTIC ACTIVITIES

Committee Findings and Recommendations

The Committee on Interscholastic Activities decided at the beginning of the study that the best way to obtain information about interscholastic athletics and other activities in the schools of this state would be to send out a comprehensive questionnaire covering the financial and other aspects of school activity programs. The results of that questionnaire can be found in the body of this report. The committee wishes to commend the many school officials who spent the time and effort to provide the information requested.

1. No need for changes in state laws. Because of the limitations of the questionnaire replies, the committee prefers to keep them in the category of information, letting them speak for themselves without using them as a basis for any specific findings or conclusions. In general, however, if the over-all totals can be relied on as indicators, the committee found nothing in the figures on the scope and operation of interscholastic athletics and other activities that could be viewed as cause for alarm. Activity programs are not unsatisfactory and the committee found no major problems. Accordingly, the committee finds no need for changes in state laws relating to activity programs in the public schools.

2. Local control is important. The fact that the questionnaire replies were lacking in uniformity is evidence that school districts are exercising local control in activity matters. Accounting methods vary from district to district. There are variations in the extent to which each activity is handled as part of the total instructional program rather than as part of a separate activity

program because this is largely a matter for decision by individual local school boards. And variations in the emphasis placed on the activity program generally or an individual activity within the program are to be expected because of differences in the interests and desires of the community, the students, and the local board.

This is as it should be. It is important that local school boards have control of their schools' activities, for they are uniquely qualified to know the interests and needs of their students and can shape activity programs accordingly.

3. Frequent local evaluation is essential. However, even though we support the principle of local control of activities we do not suggest that local school boards ought to blindly sponsor whatever activities their communities prefer, without regard for what is best in terms of the school's educational goals. Local control carries with it a need for local responsibility, local goals, and local evaluation. We believe that local school boards are aware of this need and will do all they can to measure each activity in terms of the over-all educational goals of their schools. We strongly urge that such local evaluations be undertaken frequently so that the activity program will always be up to date and oriented toward the same goals as the rest of the educational program.

4. Following accounting guidelines. The committee urges all schools to follow the State Department of Education guidelines for activity accounting. These guidelines are flexible enough to meet the needs of all districts, yet uniform enough to provide comparative information as a basis for state and local evaluation. The guidelines are contained in a booklet which can be obtained from the State Department of Education. School districts will be helping

themselves by studying and following these guidelines if they are not doing so already, and periodic attempts to collect information will be more successful when all districts are keeping books in the same way.

5. No need for annual statewide activity fund reporting. If voluntary uniformity in accounting can be accomplished otherwise, the committee does not feel it is necessary to add to the number of required reports by asking school districts to submit annual reports on their activity funds. An annual report of activity fund transactions would not be sufficient to provide information on the total costs of activity programs, since many of the costs are financed through the general fund and are not accounted for separately. The committee's experience with its questionnaire indicates that complete and valid information on total activity program costs will not be available until school districts undertake to develop a system of program accounting -- something which may come about in a few years but which is not likely to take place in the immediate future.

Consequently the principal purposes in requiring annual statewide activity fund reporting at the present time would be to establish uniform activity accounting and to provide a check against the misappropriation of activity funds. Adoption of the State Department of Education guidelines for activity accounting on a voluntary basis should eliminate the necessity for a mandatory requirement to accomplish this purpose. Present state law, which requires that activity funds must be accounted for publicly at the local level and audited periodically, should provide adequate safeguards against mishandling of activity funds. Therefore the committee suggests that no annual statewide activity fund reporting should be required,

at least for the time being.

6. Colorado High School Activities Association. The committee has been pleased with the cooperation it has received from the officials of the Colorado High School Activities Association. They have been most helpful in answering questions and providing information and assistance to the committee. From the information provided, the committee concludes that the CHSAA is performing a valuable service for the schools of this state. Interscholastic activities, especially athletic activities, appear to be organized and governed well. When problems arise, the association does its best to find solutions and, although it is impossible to please all parties to every controversy, the association has done an admirable job. The committee supports the goals of the association and urges the continued high level of service to member schools.

We are especially pleased with the recent decision to admit parochial and independent schools to membership in the association. Although as a committee we have taken no official position on this issue, most of the members feel that interscholastic competition should not be limited to the public schools. Private schools should be permitted to participate in activities sponsored by the association as long as they are willing to comply with the association's rules and regulations.

REPORT ON INTERSCHOLASTIC ACTIVITIES

The Committee on Interscholastic Activities set out to ascertain the amounts of money expended by the public schools for interscholastic athletics and other activity programs. Knowing that these activities are supported at least in part from the tax moneys in the general fund, the committee sought first of all to measure how much general fund money is used for this purpose. The state contributes a substantial amount to the general funds of local school districts, and the committee felt that the General Assembly should know the ways in which these funds are being spent.

Detailed information about activity expenditures from the general fund could not be obtained from any of the reports compiled by the State Department of Education. The Secretary's Annual Report (DS-1) gives an accounting of all general fund expenditures but provides only partial information concerning which of these expenditures were attributable to activity programs. Although one section of the DS-1 report is devoted to general fund expenditures for student body activities (salaries, other expenses, and use of general fund moneys to cover deficits in the separate activity fund), not all general fund expenditures for activity programs are reported separately under this category. For example, school districts are directed by the State Department of Education to report additional compensation to coaches and other activity sponsors as part of the total expenditures for all instructional salaries; likewise, the cost of transportation for activities is to be reported along with all other pupil transportation costs; and all operation and maintenance costs are to be reported as a unit, whether attributable to

the instructional program or the activity program. These bookkeeping methods reflect the general philosophy that activities are an integral part of the total educational program. Until school districts change from a system of fund accounting to a system of program accounting, general fund expenditures for activities will never be completely separated from general fund expenditures for science, reading, or any other part of the total school program.

Activity transactions not involving tax moneys are accounted for in a separate activity fund. Local school districts are required by law to keep records on the activity fund, but they need not follow a uniform method of accounting. Although the State Department of Education provides guidelines for activity fund accounting, the guidelines are not binding on school districts. The Secretary's Annual Report does not contain a section on the student activity fund. In 1962 the State Department of Education developed an additional page covering the activity fund, but it was rejected in the interests of cutting down on the number and length of reports required of school districts.

Since complete activity information was not otherwise available, the committee agreed to send a questionnaire to each superintendent of schools in the state asking for financial and other pertinent information about interscholastic athletics and other activity programs in 1964-65. The questionnaire was prepared by the staff of the Legislative Council with the help of the Colorado High School Activities Association and individual committee members. Every effort was made to devise a questionnaire that would produce meaningful results. Two pages of definitions were provided to help school officials in answering the questions.

However, the replies were disappointing. Due to the lack of uniformity in activity accounting and the fact that some activity expenditures are not accounted for separately, the figures were not as meaningful or as comparable as the committee had hoped they would be. Internal checks showed that there had been apparent misunderstandings resulting in discrepancies and inaccuracies. Some districts reported unusually high or unusually low expenditures which can be explained only by reviewing those districts' entire questionnaires or by contacting the schools themselves. In many cases the replies were incomplete.

Consequently the committee feels compelled to preface its report of the questionnaire results with a note of caution. The reader who questions the information for a particular school district should check with the school officials of the district involved or with the Legislative Council staff for a more complete explanation.

The questionnaire was divided into three parts. (A copy of the full questionnaire is included in this report as Appendix A.) Part I applied to the district as a whole. Questions were asked regarding the receipts and expenditures of the activity fund generally, transfers from the general fund, the sale of activity tickets, the method of handling activity fund money, and the breakdown of expenditures for each activity from the activity fund and the general fund. Questions were also asked concerning transportation costs for specific activities, the extent of junior high and elementary athletic competition, and the relationship between interscholastic athletics and the physical education program.

Part II of the questionnaire asked for the number of students in high school participating in specific athletic and other activities,

the amount of time spent at such activities, and the school personnel required to conduct the activities.

Part III was similar to Part II but applied to the junior high schools of the district.

Although the committee discussed the need for information on the proportions of capital outlay and the value of sites and buildings attributable to interscholastic athletics and other activity programs, no questions on these subjects were included in the questionnaire because no satisfactory method was found for obtaining comparable information from all school districts.

The percentage of response on the questionnaires was high. Usable replies were received from 142 school districts, or slightly over 75 per cent of the 184 districts in the state.

QUESTIONNAIRE RESULTS

Expenditures for Activity Purposes

The principal purpose of the questionnaire was to gather information about activity expenditures from the general fund and the activity fund. The 1964-65 totals for the 142 districts replying are given below in round numbers:

<u>Type of Expenditure</u>	<u>Activity Fund</u>	<u>General Fund</u>	<u>Total</u>
Interscholastic Athletics	\$1,187,000	\$1,426,000	\$2,613,000
Intramural Sports	31,000	339,000	370,000
Music Activities	147,000	332,000	479,000
Speech Activities	19,000	26,000	45,000
Dramatics	50,000	23,000	73,000
Student Council	182,000	8,000	190,000
Pep Club	126,000	45,000	171,000
School Publications	428,000	43,000	471,000
Other Clubs and Activities	1,320,000	31,000	1,351,000
Service Fees to Activities Association	13,000	9,000	22,000
	<u>\$3,503,000</u>	<u>\$2,282,000</u>	<u>\$5,785,000</u>

Total expenditures for activity purposes were \$5.78 million in 1964-65. This includes expenditures from both the general fund and the activity fund, and covers all types of activities.

Approximately 60 per cent of the reported activity expenditures were financed through the activity fund, while 40 per cent were financed from the general fund. General fund expenditures for activity purposes amounted to \$2.28 million, just over one per cent of the \$221 million 1964-65 general fund expenditures for all purposes.

Expenditures for interscholastic athletics were greater than for any other single type of activity, amounting to 45 per cent of total activity expenditures and 62 per cent of total general fund expenditures for activity purposes.

Tables I and II give information on activity expenditures in

individual districts. Table I shows actual dollar amounts expended from the activity fund and the general fund for interscholastic athletics and for all other activities combined. Table II shows the per pupil expenditures in individual districts for interscholastic athletics and for all other activities. Figures for individual districts should be used with caution.

Expenditures for Interscholastic Athletics

Total figures on the types of expenditures for interscholastic athletics in 1964-65 were as follows:

<u>Type of Expenditure</u>	<u>Activity Fund</u>	<u>General Fund</u>	<u>Total</u>
Equipment, Materials, Supplies	\$ 567,000	\$ 280,000	\$ 847,000
Transportation	86,000	112,000	198,000
Travel Expense	111,000	30,000	141,000
Officials' Fees	165,000	5,000	170,000
Operation of Plant	8,000	204,000	212,000
Maintenance of Plant	15,000	96,000	111,000
Additional Compensation to Coaches	5,000	634,000	639,000
Other Expenditures Attributable to Interscholastic Athletics	230,000	65,000	295,000
	<u>\$1,187,000</u>	<u>\$1,426,000</u>	<u>\$2,613,000</u>

The greatest expenses were for equipment, materials, and supplies (32 per cent). Coaches' additional compensation accounted for 24 per cent of the total expenditures for interscholastic athletics and were financed almost entirely from the general fund.

Of the total expenditures for interscholastic athletics, 55 per cent came from the general fund and 45 per cent from the activity fund. Salaries of coaches, costs of plant operation and maintenance, and much of the transportation cost were usually financed from the general fund. Equipment, travel, and officials' fees were more likely to be paid for out of the activity fund.

Totals may not be exact, due to rounding.

About \$289,000, or 11 per cent of the total was used for interscholastic athletics at the junior high and elementary levels, the districts reported. All but \$50,000 of this came from the general fund.

Transfers from General Fund to Activity Fund

When the student activity program is not completely self-supporting, the activity fund must be supplemented with moneys from the general fund. This can be done either by making the expenditures directly from the general fund or by transferring general fund moneys into the activity fund to be spent and accounted for in the same manner as other activity fund moneys. Figures on the use of the latter method, transfers from the general fund to the activity fund, were reported as one of the items on the questionnaire.

Of the 142 school districts replying to the question, 59 reported some transfer of general fund moneys into the activity fund for 1964-65. The total amount transferred, according to the questionnaire replies, was \$236,000.

It is interesting to note that the 1964-65 Secretary's Annual Reports show a statewide total of \$154,134 as the amount of general fund moneys used to cover deficits of separate student activity funds.

Transfers from Activity Fund to General Fund

In some cases the non-tax receipts of the student activity fund exceed the expenditures from that fund. When this happens, the district may transfer the excess into the general fund for use in the regular school program.

Transfers of this type were not as frequent. Eighteen

of the 142 districts answering this question reported a transfer from the activity fund into the general fund in 1964-65. The total amount reported transferred by these 18 districts was \$108,000.

Activity Tickets

The committee felt it would be interesting and helpful to know the practices of school districts regarding the sale of activity tickets. The questionnaire asked whether activity tickets were sold, whether they were mandatory or voluntary, and what the price was.

Of 139 school districts replying, 70 sold activity tickets in 1964-65. Of the 70 districts, 48 reported that the purchase of an activity ticket was voluntary, 21 reported it was mandatory, and one said it was "recommended".

The prices of activity tickets varied from district to district, with the median price falling between \$5.00 and \$6.00. The range was as follows:

<u>Price</u>	<u>No. of Districts</u>
\$10.00 - 10.99	1
9.00 - 9.99	1
8.00 - 8.99	2
7.00 - 7.99	2
6.00 - 6.99	5
5.00 - 5.99	27
4.00 - 4.99	9
3.00 - 3.99	11
2.00 - 2.99	5
1.00 - 1.99	2
Less than \$1.00	5
None sold	69
	<u>139</u>

Handling of Activity Fund Moneys

Since not all school districts handle their activity fund moneys in the same way, the committee asked each district to report

whether the activity fund is kept physically separate or commingled with other school district moneys. The State Department of Education recommends depositing activity fund moneys in a separate bank account, under either a school-centralized or a district-centralized plan. Most districts (113 of 136 reporting on this question) kept activity moneys physically separate from other school moneys. Only 22 districts stated that they commingled activity funds with other school funds.

Most of the districts (129) use either a school-centralized or a district-centralized plan. Only 8 districts still permit separate independent accounts in the names of various organizations, a practice which the State Department of Education states can no longer be condoned.

The school-centralized plan is used in 42 districts. This is where each individual school in a district is in charge of the activity funds of that school and has its own activity fund bank account.

The district-centralized plan is followed in 87 districts. Under this plan the district's central office is in charge of the activity funds for the entire district and the individual schools do not handle their own activity fund bank accounts.

Student Participation in Activities

The number of students reported as actively participating in interscholastic athletics was higher than for any other single type of activity -- over 26,000. Music was next with 22,000. Pep club involved 15,000 and intramural sports 12,000. Other activities had relatively small numbers of participants.

Nearly all of the participants in interscholastic athletics were boys, while intramural sports involved an equal number of boys and girls. Most of the pep club participants were girls.

The number of students in each of the various types of activities is shown below:

<u>Type of Activity</u>	<u>No. of Students Actively Participating</u>		
	<u>Boys</u>	<u>Girls</u>	<u>Total</u>
Interscholastic Athletics	26,176	483	26,659
Music Activities	9,397	13,236	22,633
Pep Club	120	15,554	15,674
Intramural Sports	6,476	6,392	12,868
Dramatics	3,030	4,379	7,409
School Publications	1,589	2,668	4,257
Speech Activities	1,969	2,247	4,216
Student Council	2,007	1,926	3,933
Other School Clubs	16,036	21,903	37,939

Student Participation in Major Sports

The total number of high school boys in the districts responding to the questionnaire was 48,368 for 1964-65. Of this total, the numbers listed as being on regular interscholastic teams in the four major sports were as follows:

Football	8,876
Basketball	6,039
Track	5,367
Baseball	4,210

This means that football involved about 18 per cent of the boys, statewide; basketball, 12 per cent; track, 11 per cent; and baseball, 9 per cent.

The non-interscholastic programs (sports competition within the district only or within the individual school) did not involve this many students. Basketball was the only sport in which a sizeable number of high school boys participated outside the interscholastic program, and it involved only four per cent. Figures on

non-interscholastic competition in the four major sports are given below:

Basketball	2,038
Football	608
Track	382
Baseball	297

Table III shows school and district information on the number of high school boys participating in interscholastic and non-interscholastic competition in the four so-called major sports in 1964-65.

Interscholastic Athletics as Substitute for Physical Education

Knowing that in some schools participation in interscholastic athletics excuses students from regular physical education requirements, the committee sought information on the extent of this practice. The questionnaires showed that of 136 districts, 62 accept participation in interscholastic athletics as a substitute for physical education; 74 do not.

Athletic Competition at the Junior High or Elementary Level

The committee was interested in knowing the number of school districts having junior high or elementary athletic programs involving competition with other districts or among schools within the same district. This information is given below. The total number of districts answering this question was 142. Basketball is by far the most frequently competitive sport at the junior high or elementary level, with 124 of 142 districts having competition with other districts.

	<u>Competition With Other Districts</u>	<u>Competition Among Schools Within District</u>
Basketball	124	80
Football	81	32
Track	59	37
Wrestling	40	27
Baseball	13	12
Other	6	5

** Although this is an undivided high school, for accounting purposes records are kept separate for grades 9-12.

NR -- "Not reported" indicates the district failed to report the information requested in this part of the questionnaire.

Number of Teachers Receiving Additional Compensation for Activities

Activity programs involve a large number of teachers, many of whom receive additional compensation for their activity duties. The practice of paying additional salary for time spent on activities outside school hours is especially prevalent in interscholastic athletics. Most coaches receive additional compensation for each sport.

The committee asked districts to report how many teachers receive additional compensation for the various types of activities. The results were as follows:

Interscholastic Athletics	955
Pep Club	141
Dramatics	126
Music Activities	123
School Publications	107
Intramural Sports	101
Speech Activities	65
Student Council	22
Other School Clubs	84

COLORADO HIGH SCHOOL ACTIVITIES ASSOCIATION

The committee spent some time talking with officials of the Colorado High School Activities Association about its role and function in relation to the activity programs of individual high schools. The representatives of the association described its operations and answered questions about specific problems that have come up in recent years.

The Colorado High School Activities Association is a voluntary association of member schools and is concerned with making rules and carrying out arrangements for the various competitive activities in the state's high schools. Although originally organized to serve in the area of athletics alone, the association now includes music, speech, and other interschool activities in addition to athletics. There are over 30 local associations and divisions in the state association, with over 200 schools participating.

Member schools pay annual service fees ranging from \$50 to \$200, depending on the size of the school. Some schools pay the service fee from their activity funds while others pay it out of their general funds.

The annual budget of the association is approximately \$124,000. Part of this amount (about \$23,000) comes from service fees from member schools and the rest comes from gate receipts from state tournaments, especially the state basketball tournament.

The association has a number of responsibilities: publication and distribution of rule books for all school sports; preparation of other publications related to school activities; organization of music festivals, speech contests, cheerleaders' clinics,

and student council conferences; and making decisions on questions of eligibility and interpretations of rules, along with the imposition and enforcement of penalties. In addition, the association's central office maintains files of reports and records relating to the conduct of high school activities in the state.

Admission of Private Schools to CHSAA

In June of 1965, when the committee held its first meeting, one of the topics discussed with officials of the CHSAA was the possibility of admitting private schools as well as public schools. The rules of the association had always excluded private schools and this had meant that parochial and other independent high schools could not participate in state tournaments.

Association officials reported that the question of admitting private schools would be considered at the annual meeting to be held in April of 1966. They stated that there were problems of boundaries and eligibility which had to be worked out before private schools could be admitted.

A new rule was adopted by the association in 1966 which permits non-public schools to apply for membership. Any non-public school accepted will be an associate member of the association with all rights except those of ownership of association assets. The non-public schools will be allowed to establish their own geographic boundaries and students participating in the schools' athletic events must reside within these boundaries.

Participation in Post Season Sports

During 1965 the CHSAA was involved in a court action in which a student questioned the association rule against participating in

post season sports. The student had entered a swimming meet outside the state during the summer and was subsequently declared ineligible for high school competition under the association rule. The court found that the rule as written was not clear and could not be enforced.

Following the court decision the association, at its April meeting, revised the rule on post season participation to clarify it and make it more flexible, especially as it applies to individual (rather than team) sports. Association officials commented that most schools and students are satisfied with the restrictions on athletic competition under the rules of the association. Objections are infrequent and when they do occur they often come from parents of participating students.

Broadcasting of Athletic Events

The committee asked association officials to comment on the relationships between the CHSAA and the radio and television broadcasters who cover athletic events. The report was that there have been no recent difficulties as far as the state association is concerned. Broadcasters may still be having difficulties obtaining permission from some individual high schools to broadcast local games, but this is not a state level problem.

Schools charge broadcasters from \$2.50 to \$10.00 per game to cover an athletic event. The fee for the 36 games of the state basketball tournament is about \$50.00, an amount which does not cover the cost of the facilities provided, the association reported.

Admission of Non-accredited Schools

At the association's annual meeting in April of 1966, a rule

change was adopted which required that a public school must be accredited by the State Department of Education in order to become a member of the Colorado High School Activities Association. Prior to that time, from 1962 to 1966, non-accredited schools could apply for and be admitted to membership in the association.

The committee heard testimony from representatives of three non-accredited schools desiring association membership. Neighboring schools had been accepted into the association before the 1966 rule change requiring accreditation, and since association members usually schedule games with one another, this left the non-member schools without a full athletic schedule. Consequently the three non-accredited schools, seeking membership in the association, asked that the rule be waived or changed so that they could be considered for membership.

No official change in the rules can take place until April of 1967. At that time, if the problem still exists, the association may be asked to take up the matter again.

TO COLORADO SCHOOL SUPERINTENDENTS:

As you probably know, the General Assembly in its 1965 regular session created a special legislative committee to study the interscholastic athletic programs of the public schools of Colorado -- the extent to which public funds are involved, the number of students participating, the time spent, and the personnel required compared with intramural sports, other extra-curricular student activities, and physical education.

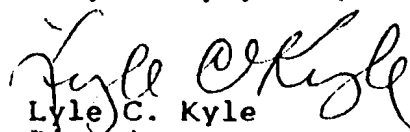

The committee has asked our office to gather some basic facts about interscholastic athletic programs. Most of the information needed is outside the scope of the annual reports which you prepare for the State Department of Education. Consequently, although we are reluctant to add to the number of required reports, we are asking you to assist us in our study by answering the questions on the enclosed questionnaire.

You will notice that there are three parts to the questionnaire. Part I is for the school district as a whole; Part II is for each individual high school within the district; and Part III is for each junior high school within the district. We have attempted to enclose the appropriate number of copies of Parts II and III for districts having more than one high school or junior high.

WE WOULD APPRECIATE YOUR RETURNING ALL PARTS OF THE QUESTIONNAIRE TO THE COLORADO LEGISLATIVE COUNCIL BY NOVEMBER 15.

Thank you for your cooperation. We recognize that compiling the information requested will require considerable time and effort on the part of you and your high school and junior high principals and coaches, but we are convinced that the results of this study will be beneficial to individual school districts as well as to the General Assembly. We plan to send you a copy of the committee's final report when it is completed.

Very truly yours,

Lyle C. Kyle
Director

LCK/mp

DEFINITIONS FOR QUESTIONNAIRE ON INTERSCHOLASTIC ATHLETICS AND OTHER ACTIVITIES

This questionnaire is divided into three parts. The first part should be completed for the school district as a whole, the second part for each individual high school, and the third part for each junior high school. The following definitions are applicable to all three parts:

High School. High school includes grades 9 through 12 or 10 through 12, but does not include grades 7 and 8. Do not include adult programs.

Junior High School. Junior high school includes grades 7 and 8 or 7, 8 and 9. Please report for these grades even if they are housed with the lower grades.

Fiscal Year. Fiscal year means the most recently completed 12-month fiscal period for the school district. For most districts this will be either July 1, 1964 to June 30, 1965 or January 1, 1964 to December 31, 1964. If the accounting period for the general fund is not the same as for the activity fund, please indicate.

Activity Fund. Activity fund includes receipts and expenditures for all activities handled apart from the general fund. Receipts may include the sale of activity tickets, admissions and gate receipts from various activities, sales of school publications, and receipts from class projects, fairs, dances, and concessions. Expenditures may include the purchase of equipment and supplies, uniforms, operation and maintenance of facilities used for activities, transportation to and from activities, officials' fees, additional compensation to teachers and coaches, and expenditures for class projects, fairs, dances, and concessions. Items should be reported under the activity fund only if they were financed through that fund and not through the general fund. Do not omit items from the activity fund simply because they were not handled through the district's central business office; all items of this nature should be reported even if the receipts and expenditures took place at an individual school within the district.

Interscholastic Athletics. Interscholastic athletics include all athletic contests between schools, whether or not the schools are in the same district. All teams involved in interschool competition should be included. All practice conducted apart from the regular physical education classes and intramural sports should be included, whether during school hours, during the noon hour, or before or after school. Unless otherwise indicated, "interscholastic" includes both interdistrict and intradistrict competition between schools.

Intramural Sports. Intramural sports include athletic competition and other school-sponsored recreational activities among students of the same school, conducted apart from the regular physical education classes, whether during school hours, during the noon hour, or before or after school. Do not include recreational programs for adults or out-of-school youth. Unless otherwise indicated, "intramural" includes intraschool activities but excludes intradistrict activities between schools.

Equipment, Materials, and Supplies. Expenditures for equipment, materials, and supplies include the purchase of such items as athletic uniforms and equipment, gymnasium and playing field equipment, band uniforms, instruments and music, cheerleaders' uniforms, properties for dramatic productions, and working materials for school newspapers and annuals. Numerous other items probably will fit into this category. If any of the items are used for two or more purposes (whether school activities or part of the regular instructional program or an adult program), please estimate the proportion of the cost attributable to the specific school activity in question. This probably can be done by estimating the proportionate amount of time the item is used for the specific school activity and applying this proportion to the total cost of the item. If expenditures are particularly high due to the opening of a new school or for some other reason, please indicate.

Transportation. Transportation expense includes the total cost of operating school buses or private vehicles for trips connected with the specified school activities. Compensation for drivers on activity trips should be included. If transportation costs for the various activities have not been separated from other transportation costs for the district, please estimate the proportion of the total cost attributable to the specific activity in question. This probably can be done by estimating the proportionate number of miles traveled on activity trips and applying this proportion to the total transportation cost.

Travel Expense. Travel expense includes the cost of meals and lodging for trips connected with the specified school activities.

Operation of Plant. Expenditures for operation of plant include the cost of housekeeping functions related to the specific school activity in question. Heat, utilities, and custodial services are examples of this type of expenditure. If operating costs for the various activities have not been separated from other operating costs for the district, please estimate the proportion of the cost attributable to the specific activity in question. This probably can be done by estimating the cost of operating the part of the plant used for the specific activity, estimating the proportionate amount of time that that part of the plant is used for the activity, and applying this proportion to the total cost of operating that part of the plant.

Maintenance of Plant. Expenditures for maintenance of plant include the cost of repairs and replacements needed for upkeep of grounds, buildings and equipment used for the specific school activity in question. If maintenance costs for the various activities have not been separated from other maintenance costs for the district, please estimate the proportion of the cost attributable to the specific activity in question. This probably can be done by estimating the cost of maintaining the part of the plant used for the specific activity, estimating the proportionate amount of time that that part of the plant is used for the activity, and applying this proportion to the total cost of maintaining that part of the plant.

Additional Compensation to Teachers and Coaches. Additional compensation means the extra salary paid for coaching duties, conducting marching band, or for sponsoring other types of activities. It does not include the regular teaching salary paid according to the basic salary schedule. Do not attempt to estimate the cost of time spent on student activities if extra salary is not paid.

QUESTIONNAIRE ON INTERSCHOLASTIC ATHLETICS
AND OTHER ACTIVITIES

Part I: For the School District As a Whole

County _____ School District _____

Total High School Enrollment in District (Fall, 1964) _____

Activity Fund Information

Please give the following activity fund information for your school district. Indicate the fiscal year for which the information is given:

July 1, 1964 to June 30, 1965 _____
January 1, 1964 to December 31, 1964 _____
Other _____

Beginning Balance _____

Receipts

Sale of Activity Tickets _____
Gate Receipts from Interscholastic Athletics (other than activity tickets) _____
Receipts from Other Sources _____

Total Receipts _____

Transfers from General Fund to Activity Fund _____

GRAND TOTAL _____

* * * * *

Expenditures

Expenditures for Interscholastic Athletics _____
Expenditures for Other Purposes _____

Total Expenditures _____

Transfers from Activity Fund to General Fund _____

Ending Balance _____

GRAND TOTAL _____

Activity Fund Information (continued)

Activity Tickets

What was the price of an activity ticket for the 1964-65 school year?

Price for students _____
Price for others (if sold to others) _____

Was the purchase of an activity ticket mandatory or voluntary for students?

Mandatory _____
Voluntary _____

Handling of Activity Fund Moneys

Were activity fund moneys kept physically separate from other school district moneys or were they commingled with other district moneys and given a separate accounting on paper?

Kept physically separate _____
Commingled but accounted for separately _____
Other method (please explain under "Comments") _____

If your activity fund moneys were kept physically separate, where were they kept and what officials and other persons had authority to draw on them?

Where Activity Funds Were Kept

Persons Authorized to Withdraw

Deposited in checking account covering activity moneys of entire district?
Yes ___ No ___

Deposited in checking account for activity moneys of each school in districts having more than one school?
Yes ___ No ___

Deposited in several different checking accounts covering different activities?
Yes ___ No ___

Kept in a safe for the school or district? Yes ___ No ___

Deposited with the county treasurer?
Yes ___ No ___

Other (please explain under "Comments")

IF YOU HAVE EXPLANATORY COMMENTS, PLEASE ATTACH ADDITIONAL SHEETS.

Information on Current Expenditures for Interscholastic
Athletics and Other Activities

Please give the following expenditure information for your school district. Indicate the fiscal year for which the information is given:
