income

ACKNOWLEDGMENTS

This series, the Colorado Statistics of Income, Individual income tax returns, has been published on a periodic basis since 1971. We are deeply indebted to Mr. Lyle Kyle, Director Colorado Legislative Council for his continuous support and encouragement for these studies. This report follows the basis model established by Dr. Reuben A. Zubrow, Department of Economics, University of Colorado. The sampling design follows that developed by Dr. George E. Bardwell, Department of Mathematics, University of Denver. Mr. Arlie Munsie, Mr. Lowell Roberts and Mr. Paul Magee of the Revenue Department were responsible for supervision, programming and operation of the complex sampling system. We are also indebted to Mr. M. Norman Taylor for providing the necessary logistical support. Particular gratitude is due to the clerical staff under the direction of Ms. Cathy Edwards. Those involved in this part of the process were Ms. Donna Cannon, Ms. Audrey Murphy, Ms. Stephanie Turner, Ms. Sandra Williams, Ms. Beverly Montez, Ms. Robin Brown. We are also extremely grateful for the keypunch support provided under the direction of Ms. Luella Zaragoza, Ms. Janet Aitken, Ms. Connie Saunders, Ms. Sharon Vine, and Ms. Valerie Whitney.

INTRODUCTION

This report continues a series of studies of the Colorado individual income tax. * Since 1972, the Colorado Legislative Council has commissioned reports on the distribution of income and the tax burden assumed by Colorado residents.

The study is designed primarily for the Colorado Legislature. It provides a concise analysis of the impact of indexation and other tax law changes enacted since 1977 and their distributional impacts. These tax law changes have reduced Colorado income taxes by \$682 million during the period from fiscal year 1979 to fiscal year 1982. The data base can also be used to estimate the effects of proposed changes in Colorado's income tax structure.**

This report is also useful to the economist, researcher, demographer, or planner who will find household income distribution data by planning region, major counties, and major cities in Colorado. Inquiries regarding this data should be directed to the Research and Statistics office in the Colorado Department of Revenue.

*Previous reports in the Colorado Legislative Council tax series are the Colorado Tax Profile Study, 1973, (CLC No. 202), Colorado Predictive Income Tax Model, 1974, (CLC No. 204), Colorado Statistics of Income, 1975, (CLC No. 215), Colorado Statistics of Income 1977, (CLC No. 230), Colorado Tax Profile Study, 1977, (CLC No. 231), Colorado Statistics of Income, 1980, (CLC No. 260), and Colorado Tax Profile Study, 1980, (CLC No. 261).

**The sample for this study consisted of 23,320 tax returns filed between July 1, 1981 and June 30, 1982. See Appendix A for description and summary of types of returns filed and Appendix B for detailed description and statistical reliability of the sample.

Section 1. RECENT INCOME AND TAX TRENDS

Colorado personal income and Colorado adjusted gross income have continued to grow strongly since the last report covering returns filed in fiscal year 1980. The Colorado legislature has also continued its commitment to tax relief by returning state revenue surpluses to taxpayers.

The legislature began its program of tax reductions in 1978 by reducing the tax base through indexation and increasing the personal exemption. Since 1978, a number of other tax reduction measures have been enacted. The result has been to greatly slow the rate of growth in "net" normal tax. Net normal tax is defined as the gross normal tax (base x rate) minus authorized tax credits.

TABLE I-1. COLORADO INCOME AND TAX LIABILITIES
FISCAL YEARS 1972-82

<u>Fiscal Year</u>	<u>Colorado Personal Income</u>	<u>Adjusted Gross Income</u>	<u>State Income Tax</u>	<u>Federal Income Tax</u>
1972	\$ 9,708	\$ 7,453	155.3	\$ 944.0
1975	14,170	10,683	256.6	1,450.0
1977	17,119	12,583	332.5	1,692.5
1980	25,687	18,509	437.6	2,712.4
1982	33,256	23,919	472.4	3,850.9

B. Average annual percentage rates of growth

1972-1975	13.4	12.7	18.2	15.4
1975-1977	9.9	8.5	13.8	8.0
1977-1980	14.4	13.7	9.6	17.0
1980-1982	13.8	13.7	3.9	19.2

As one can see by examining Table I-1, the average annual rate of growth in the state income tax was much greater than the rate of growth in either Colorado personal income or Colorado adjusted gross income in the periods

prior to enactment of the tax cuts. Since 1978, the average annual rate of growth in the state income tax has been substantially less than the corresponding growth of income. The overall percentage increase in net normal tax liability since the 1980 fiscal year was 8.0 percent as compared to an increase in Colorado adjusted gross income during the same period of 19.2 percent. The estimated gross tax liabilities without any tax cuts would have been \$534.9 million in fiscal year 1980 and \$749.2 million in fiscal year 1982. These figures would have produced an increase of 40.1 percent in tax liability instead of the 8.0 percent increase in the net normal tax liability.

The federal income tax as measured by the federal tax deduction claimed on the state income tax return increased 42% since 1980. This percentage increase is very close to the 40.1 percent Colorado state taxpayers would have experienced in the absence of tax reduction measures.

A more detailed analysis of these tax reduction measures is presented in Section III.

SECTION II. DISTRIBUTION BY INCOME CLASSES
AND PROGRESSIVITY OF TAX STRUCTURE

As Colorado income in both real and nominal terms has continued to grow, there has been a shift of taxpayers into higher adjusted gross income classes. Table II-1 shows this shift based upon these studies conducted for fiscal years 1977, 1980, and 1982.

TABLE II-1. PERCENT DISTRIBUTION
OF RESIDENT TAX RETURNS AND SHARE OF TOTAL ADJUSTED GROSS INCOME,
BY MAJOR INCOME CLASSES
FISCAL YEARS 1977, 1980, 1982

Adjusted Gross Income Classes	Number of Returns			Adjusted Gross Income		
	1977	1980	1982	1977	1980	1982
Under \$5,000	31.2	27.9	25.3	5.1	3.8	2.9
\$5,000 to \$15,000	37.6	33.3	29.9	29.5	21.0	16.1
\$15,000 to \$25,000	21.1	20.5	19.3	33.3	26.7	21.2
\$25,000 to \$50,000	8.8	15.9	21.2	23.0	34.8	40.3
\$50,000 and over	1.3	2.4	4.3	9.1	13.7	19.6
Total	100.0	100.0	100.0	100.0	100.0	100.0

The percentage of tax returns with adjusted gross incomes above \$25,000 more than doubled from fiscal year 1977 to fiscal year 1982 growing from 10.1 of total returns percent to 25.5 percent of total returns. The percentage of taxpayers with adjusted gross incomes less than \$5,000 dropped from 31.2 percent in fiscal 1977 to 25.3 percent in fiscal 1982.

The corresponding percentage shares of total adjusted gross income have changed in the same direction though to a lesser extent. While the number of households above \$25,000 grew 152 percent from 1977 to 1982, their percentage share of income increased from 32.1 percent to 59.9 percent, an increase of 87 percent. The lowest income class, under \$5,000, dropped from 5.1 percent of total adjusted gross income in 1977 to 2.9 percent in 1982.

To briefly summarize, the income classes under \$25,000 showed a drop in both percentage of households and percentage share of total income while the income classes over \$25,000 showed an increase in both categories.

Progressivity of the State Income Tax

One may similarly analyze the progressivity of Colorado's income tax by showing the percentage distribution of tax liability by income class and how that distribution has changed over time. Tables II-2 and II-3 show these results.

Table II-2 shows that taxpayers in the lowest income stratum, (less than \$5,000) represented 25.3 percent of all taxpayers but paid less than 1 percent of state income tax while the upper stratum, (income greater than \$50,000) represented 4.3 percent of all taxpayers and paid 24.5 percent of the state income tax. The federal income tax (as measured by deductions taken on the State income tax returns) can be seen to be more progressive than the state income tax as indicated by the fact that those taxpayers above \$50,000 adjusted gross income paid 34 percent of the total federal tax.

TABLE II-2. DISTRIBUTION OF RESIDENT TAX
RETURNS BY MAJOR INCOME CLASSES
FISCAL YEAR 1982

<u>Adjusted Gross Income Classes</u>	<u>Number of Returns</u>	<u>Adjusted Gross Income</u>	<u>Net Normal Tax</u>	<u>Federal Income Tax</u>
A. Money amounts in millions				
Under \$5,000	335,428	\$ 703.6	\$ 3.3	\$ 17.7
\$ 5,000 to \$15,000	397,714	3,839.2	52.1	343.1
\$15,000 to \$25,000	256,802	5,062.8	94.5	653.7
\$25,000 to \$50,000	281,475	9,621.2	206.7	1,526.1
\$50,000 and over	57,618	4,692.5	115.8	1,310.2
Total	<u>1,329,037</u>	<u>\$23,919.3</u>	<u>\$472.4</u>	<u>\$3,850.8</u>
B. Percentage distribution				
Under \$5,000	25.3	2.9	0.7	0.5
\$ 5,000 to \$15,000	29.9	16.1	11.0	8.9
\$15,000 to \$25,000	19.3	21.2	20.0	17.0
\$25,000 to \$50,000	21.2	40.3	43.7	39.6
\$50,000 and over	4.3	19.6	24.5	34.0
Total	<u>100.0</u>	<u>100.0</u>	<u>100.0</u>	<u>100.0</u>

One would expect that since incomes have increased since 1977, the percentage of tax burden assumed by the income groups over \$25,000 would also increase. Table II-3 shows that this is the case. Even though many tax law changes have been made since 1977, the percentage of total state income tax paid by taxpayers with adjusted gross incomes of over \$25,000 has increased from 41.3 percent to 68.2 percent. For a more detailed analysis of how these tax law changes have affected progressivity, the reader may consult section III.

Progressivity may also be measured by expressing the state income tax as a percentage of the Colorado adjusted gross income. Table II-4 shows that those taxpayers with adjusted gross incomes larger than \$50,000 pay 2.47 percent of their incomes in state income tax. This is more than five times the 0.46 percent paid by those with incomes less than \$5,000. The table also shows

TABLE II-3. STATE TAX BURDEN FOR
RESIDENT TAXPAYERS
FISCAL YEARS 1977, 1980, 1982

<u>Adjusted Gross Income Classes</u>	<u>Fiscal Year</u>		
	<u>1977</u>	<u>1980</u>	<u>1982</u>
Under \$5,000	2.2	1.5	0.7
\$ 5,000 - \$15,000	22.9	15.9	11.0
\$15,000 - \$25,000	33.5	25.3	20.0
\$25,000 - \$50,000	28.8	39.5	43.7
\$50,000 and over	12.5	17.8	24.5
Total	100.0	100.0	100.0

that the percentage tax burden has dropped in each of the five income classes. This is due to the large tax decreases enacted by the legislature. On the other hand, the federal tax burden increased in all but one of the income classes. The comparable progressivity can be measured by observing that the federal burden in the highest bracket is eleven times that of the lowest bracket.

TABLE II-4. TAX LIABILITY AS A PERCENTAGE,
OF GROSS INCOME, RESIDENT TAXPAYERS,
FISCAL YEARS 1980 and 1982

<u>Adjusted Gross Income Classes</u>	<u>Effective Average State Tax Rates</u>			<u>Effective Average Federal Tax Rates</u>		
	<u>1980</u>	<u>1982</u>	<u>Percent Change</u>	<u>1980</u>	<u>1982</u>	<u>Percent Change</u>
Under \$5,000	.90	.46	-48.9%	2.47	2.52	+ 2.0%
\$ 5,000 to \$15,000	1.77	1.35	-23.7%	8.74	8.94	+ 2.3%
\$15,000 to \$25,000	2.22	1.87	-15.8%	12.19	12.91	+ 5.9%
\$25,000 to \$50,000	2.65	2.15	-18.8%	15.65	15.86	+ 1.3%
\$50,000 and over	3.04	2.47	-18.7%	29.38	27.92	- 5.0%
Total	2.34	1.97	-15.8%	14.65	16.10	+ 9.9%

Another indication of the relative progressivity of the state and federal taxes is to express the state tax liability as a percentage of the federal tax liability. Table II-5 shows this relationship and how it has changed over time.

TABLE II-5. STATE/FEDERAL TAX RATIOS
FOR RESIDENT TAXPAYERS
FISCAL YEARS 1977, 1980, and 1982

<u>Adjusted Gross Income Classes</u>	<u>Ratios of State Income Tax Liability to Federal Income Tax</u>			<u>Percent Change in Tax Ratios</u>	
	<u>1977</u>	<u>1980</u>	<u>1982</u>	<u>1977-1980</u>	<u>1980-1982</u>
Under \$ 5,000	.374	.362	.186	-3.2%	-48.6
\$ 5,000 to \$15,000	.224	.203	.152	-9.4	-25.1
\$15,000 to \$25,000	.221	.182	.145	-17.6	-20.3
\$25,000 to \$50,000	.196	.170	.135	-13.3	-20.6
\$50,000 and over	.116	.104	.088	-10.3	-15.4
Total	<u>.194</u>	<u>.160</u>	<u>.123</u>	<u>-17.5%</u>	<u>-23.1</u>

Because the federal income tax is more progressive, the lowest income class shows the highest ratio at .186 and the highest income class shows the lowest ratio at .088. At the lower end of the income spectrum, there are many taxpayers who pay a state income tax but have no federal income tax liability. This is due to the wide difference in the standard deductions allowed by the state and federal governments. This difference, however, has been shrinking as indexation of the Colorado tax structure has increased the threshold level at which the Colorado tax is first incurred. Indexation also accounts for the virtual reversal in trend of the percentage changes in the periods compared. In the 1977 - 1980 period the two lowest income classes had the smallest percentage changes while in the 1980-1982 period, these two classes had the largest percentage changes.

SECTION III. INCOME TAX REDUCTION MEASURES

Since 1977, the Colorado Legislature has enacted a wide range of income tax law changes which have served to lower the tax otherwise imposed on a Colorado taxpayer. Some changes have affected (or at least had the potential to affect) all Colorado taxpayers. These are changes which affect Colorado deductions or Colorado tax rates. These include a change in the personal exemption amount from \$750 to \$850 and the introduction of indexation to the Colorado tax structure.

Other changes to the Colorado tax structure have potentially affected only a portion of the state taxpayer population. Examples are introduction of the investment credit, energy credit, and the interest and dividend modification.

This section will analyze the impact of each of the major changes. The impacts were estimated by simulations from a sample of current income tax data or, when possible, computing these changes from existing data bases for calendar years 1979 and 1981. Estimates of revenue impacts for calendar years 1978 and 1980 have been made using the 1979 and this 1981 data as benchmarks for simulation.

A. INDEXATION

The philosophy behind indexing is to stop or slow "bracket creep"; i.e., the progression into higher tax brackets as incomes increase due to inflation.

The 1978 Colorado Legislature enacted the first indexation law in the United States. Currently, nine other states have enacted indexation legislation although four states have delayed implementation until their revenue surpluses are higher. The federal government is scheduled to adopt indexation in the 1985 tax year. Colorado indexes the standard deduction, the personal exemption, and the rate structure. Table III-1 shows how these levels have increased since 1978.

TABLE III-1.
LEVELS OF STANDARD DEDUCTION, PERSONAL
EXEMPTION, AND RATE BRACKETS

	<u>Indexing Factor a/</u>	<u>Standard Deduction</u>	<u>Rate Personal Exemption</u>	<u>Rate Bracket Size</u>	<u>Bracket Range b/</u>
1977 ^{c/}	1	\$1,000	\$ 850	\$1,000	\$0-\$10,000
1978	1.06	\$1,060	\$ 901	\$1,060	\$0-\$10,600
1979	1.07	\$1,134	\$ 964	\$1,134	\$0-\$11,342
1980	1.09	\$1,236	\$1,051	\$1,236	\$0-\$12,363
1981	1.08	\$1,335	\$1,135	\$1,335	\$0-\$13,352

a/ Indexing factors given are for each year. Compounded rates are 1979, 1.1342; 1980, 1.2363; 1981, 1.3352.

b/ Rate bracket range is infinite after upper limit given.

c/ 1977 was prior to indexation. It is given for comparison purposes.

Table III-2 gives the estimated impacts for each year that indexation has been in effect. The 1979 and 1981 impacts have been determined from the 1980 Statistics of Income data base and the data base for the current year. The 1978 and 1980 impacts have been estimated.

TABLE III-2. IMPACT OF INDEXATION ON
COLORADO INDIVIDUAL INCOME TAX LIABILITY
(MILLIONS OF DOLLARS)

<u>Calendar Year a/</u>	<u>Normal Tax Liability with Indexing</u>	<u>Estimated Normal Tax Liability Without Indexing</u>	<u>Difference</u>
1978	\$ 438.4	\$ 456.4	\$ 18.0
1979	492.7	532.6	39.9
1980	560.2	640.7	80.5
1981	602.7	722.5	119.8
Total	<u>\$2,094.0</u>	<u>\$2,352.2</u>	<u>\$ 258.2</u>

d/ Impacts given are for income earned in calendar years listed.

To sum up the Colorado legislature has lowered the individual income tax by \$258.2 million, or 11 percent, in a 4 year period by indexing the income tax structure. A Colorado household has received an average benefit of \$196 during this four year period. (Note: the percentage reduction in tax liability has increased each year from 3.9% on income earned in 1978 to 16.6% on income earned in 1981).

The Statistics of Income report in 1980 treated at length the impact of indexation on the progressivity of the Colorado income tax. Table III-3 shows this impact for returns filed in fiscal year 1982. Indexation has clearly maintained and increased the overall progressivity of the Colorado income tax structure. The percentage tax savings drops with increasing income levels.

TABLE III-3. VALUE OF TAX REDUCTIONS
ATTRIBUTABLE TO INDEXATION
FISCAL YEAR 1982

<u>Adjusted Gross Income Classes</u>	<u>Unindexed Gross Normal Tax Liability</u>	<u>Tax Reduction</u>	<u>Percentage Benefit Due To Indexation</u>
A. Thousands of dollars			
Under \$5,000	\$ 7,132	\$ 2,638	37.0
\$ 5,000 to \$15,000	86,098	20,906	24.3
\$15,000 to \$25,000	150,201	32,032	21.3
\$25,000 to \$50,000	313,304	51,126	16.3
\$50,000 and over	165,786	13,156	7.9
Total	<u>\$722,521</u>	<u>\$119,858</u>	<u>16.6</u>

Table III-4 shows the impact if only the personal exemption, only the tax rate brackets, or only the standard deduction were indexed. As one can see, only the standard deduction is entirely progressive. This is because a higher percentage of taxpayers in the lower income brackets utilize the standard deduction (83% of all resident returns with AGI less than \$15,000) while as income increases there is a tendency to use itemized deductions (79% of all resident returns with AGI greater than \$15,000).

TABLE III-4. VALUE OF TAX REDUCTIONS
BY COMPONENT ATTRIBUTABLE TO INDEXATION
FISCAL YEAR 1982

<u>Adjusted Gross Income Classes</u>	Unindexed Gross Normal Tax Liability	<u>Value of Indexation of</u>		
		Unindexed Personal Exemptions	Rate Brackets	Standard Deduction
Under \$5,000	\$ 7,132	\$ 678	\$ 1,054	\$ 1,257
\$ 5,000 to \$15,000	86,098	9,110	9,117	4,818
\$15,000 to \$25,000	150,201	11,744	19,631	2,496
\$25,000 to \$50,000	313,304	18,451	33,469	1,018
\$50,000 and over	165,786	4,304	8,879	34
Total	\$ 722,521	\$44,287	\$72,150	\$ 9,623

B. Value as percent of unindexed liability

Under \$5,000	9.5	14.8	17.6
\$ 5,000 to \$15,000	10.6	10.6	5.6
\$15,000 to \$25,000	7.8	13.1	1.7
\$25,000 to \$50,000	5.9	10.7	0.3
\$50,000 and over	2.6	5.3	*
Total	6.1	10.0	1.3

* Less than .05 percent

Note: Columns 2, 3, and 4 do not equal column 2 of Table III-3. As the components of indexation are added, a taxpayer may be shifted to a lower tax bracket, making the overall impact smaller.

Indexing either the personal exemption or rate brackets only is neither entirely progressive nor regressive. Indexation of only the personal exemption would be regressive for the under \$5,000 through the \$15,000 income classes and then progressive thereafter. This is a change from the 1980 analysis when the results were progressive through all income classes. Indexation of the rate brackets also produced a change from 1980. In 1982, there is no clear tendency for indexation of brackets to be either progressive or regressive. In 1980, the analysis showed regressivity through the \$15,000 to \$25,000 income class and progressivity thereafter.

It must be stressed that when all features of indexation are combined, the Colorado tax structure remains progressive.

B. COLORADO INCOME TAX CREDITS

Since 1979, the Colorado legislature has enacted a number of tax credits. The Colorado general fund had large surpluses from 1978 to 1981. The legislature desired to utilize tax credits as a mechanism for returning this surplus to taxpayers in the form of tax relief and to encourage certain sectors of the economy. This section will discuss the nature and revenue impact of these tax credits and their impact on tax burdens.

The major credit enacted was a general tax credit against normal tax liability. This credit was 10 percent for 1979 tax liability, 20 percent for 1980, and 16 percent for 1981. This credit benefits only those taxpayers with a tax liability. Table III-5 shows the cost of this credit and all other credits to be discussed below.

TABLE III-5.
 COLORADO INDIVIDUAL INCOME TAX CREDITS, ALL RETURNS
 FISCAL YEARS 1980 to 1982

	Fiscal Year		
	1980	1981	1982
A. Money amounts in thousands			
General Tax Credit <u>1/</u>	\$ 47,724	\$107,799	\$ 98,596
Energy Credit			
Energy Conservation	NA	10,534	9,763
Renewable Energy	NA	2,935	5,467
Investment Credit <u>2/</u>	3,557	7,196	10,041
Inventory Credit <u>3/</u>	118	470	839
Heat Credit	5,922	6,456	5,523
Other Credits	10	25	242
Total	\$ 57,331	\$135,415	\$130,471

NA - Not available in that year

1/ General tax credit was 10% for 1979 returns filed in fiscal year 1980, 20% for 1980 returns filed in fiscal year 1981, and 16% for 1981 returns filed in fiscal year 1982.

2/ Investment credit equal to 10% of federal credit for 1979 returns filed in fiscal year 1980, 25% for 1980 returns filed in fiscal year 1981, and 15% for 1981 returns filed in fiscal year 1982.

3/ Inventory credit equal to 20% of inventory taxes paid in 1979 for returns filed in fiscal year 1980, 40% of inventory taxes paid in 1980 for returns filed in fiscal year 1981, and 60% of inventory taxes paid in 1981 for returns filed in fiscal year 1982.

The next largest credit in fiscal year 1982 was the energy credit. This credit was first available on Colorado tax returns for the 1980 tax year. It is provided for installation of energy conserving measures by Colorado residents in their principal residence and for renewable energy source property installed to benefit their principal residence. Table III-5 shows the cost for both portions of the credit.

The investment credit was first effective in the 1979 tax year. It is intended to encourage investment in income producing assets in Colorado. The Colorado credit is computed as a percentage of the investment tax credit

allowed on federal tax returns. The Colorado credit allowed was set at 10 percent for 1979, 25 percent for 1980, and 15 percent for 1981. It is allowed only for assets located within Colorado. The investment credit reported in this analysis is net of any investment credit recapture.

The inventory tax credit was also first allowed for the 1979 tax year. It is intended to offset the inventory property tax assessed by the counties. The credit allowed was 20% of inventory taxes paid in 1979, 40% in 1980, and 60% in 1981.

The heat credit was enacted in 1979 and applies to 1979 and following years. In a similar manner to the property tax credit enacted in 1972, an elderly (over 65) or disabled taxpayer may receive up to \$160 to offset high heating costs. The credit declines proportionally with increases in income and is limited to taxpayers with total incomes under \$11,200 for married taxpayers and \$7,500 for single taxpayers.

Other tax credits in effect since 1979 are the new business facilities credit, the commercial, industrial, and agricultural energy credit, and the employed handicapped credit. These credits are relatively small in size and their combined impacts are provided in Table III-5.

C. OTHER TAX REDUCTION MEASURES

This section discusses four other tax reduction measures passed since 1978. First, there was much discussion among Colorado tax policy makers regarding the growing difference between the standard deduction allowed on federal tax returns (\$2,300 for single taxpayers and \$3,400 for married taxpayers) and the standard deduction allowed on Colorado tax returns (\$1,000 multiplied by the indexation factor or \$1,335 in 1981). Colorado law previous to 1979 allowed a resident taxpayer to claim itemized deductions only if he claimed itemized deductions on the federal return. Allowing a taxpayer to optionally itemize

deductions resolved some of the dilemma regarding the difference between the federal and state standard deductions. For example, it would be to a taxpayer's advantage to itemize deductions only on the state return when itemized deductions exceeded the Colorado standard deduction but were smaller than the federal standard deduction. This tax deduction measure was analyzed using the sample data base. Results for this measure and the other three measures considered are presented in Table III-6.

The standard deduction in Colorado prior to 1980 was defined to be the greater of a low income allowance or 10% of adjusted gross income not to exceed \$1,000 (\$500 for a married couple filing separate returns). The new law multiplies the existing standard deduction by the indexation factor. This change primarily benefits low and middle income taxpayers.

The basic personal exemption amount was raised from \$750 to \$850 effective with the 1978 tax year. The indexation factor applies to the \$850 exemption amount. This tax reduction measure is progressive in nature; i.e., the lower the income the higher the percentage reduction in tax liability.

Finally, effective in the 1980 tax year, an interest and dividend exclusion was given to taxpayers earning such income. The amount of this exclusion is \$200 for interest income and \$200 for dividend income for single individuals and \$400 each for interest and dividend income earned by married taxpayers. The Colorado exclusion is to be reduced by any exclusion granted on the federal tax return. The federal government granted an exclusion on the 1981 tax returns which precluded Colorado taxpayers with interest and dividend income of less than \$200 (\$400 for married taxpayers) from claiming a

Colorado modification. The sample data for the 1981 returns does not therefore fully represent the impact of this law for 1981 income. The estimates of the tax in Fiscal Year 1981 were made from the 1980 Statistics of Income data base.

D. SUMMARY

Table III-7 shows a summary of the income tax reductions enacted since 1977. It should be noted that this is a static analysis; i.e., each tax reduction method is treated independently. In reality, there is an interaction between these measures and thus the effects of some of the tax cuts would be smaller or larger in the absence of other measures. It would not be possible to accurately simulate the dynamic situation, however.

In four years, Colorado taxpayers have received \$681.9 million in individual income tax relief. Assuming an annual average of 1.31 million households, during this time period, the Colorado household has received an average of \$521 income tax relief during the four year time period. Indexation has been the primary method for tax relief accounting for \$258.2 million or 37.9 percent of the total. This should continue to be the case

since the impact of indexation is cumulative. The general tax credit was a close second accounting for \$254.1 million of tax relief or 37.3 percent of the total. The general tax credit was not in effect for the 1982 tax year and will not likely be in effect for several years.

Total	\$35.4	\$117.0	\$249.7	\$279.8	\$681.9

Table III-8 shows the impact of these tax cuts by adjusted gross income classes and the progressivity of these tax cuts for the returns filed in fiscal year 1982. In order to fully show the impact of these changes, a revised definition of net normal tax is used for this table only. Rather than defining this tax as zero for those taxpayers whose tax credits (primarily the heat credit) exceeded the gross normal tax, a negative normal tax is used to estimate what the gross normal tax would have been in absence of the tax reduction measures.

As noted previously, indexation, removal of the low-income allowance, the increase in the personal exemption, and the heat credit are progressive in

TABLE III-8 DISTRIBUTED IMPACTS OF TAX REDUCTION
MEASURES, FISCAL YEAR 1982

*Less than 0.05 percent

nature, i.e., the percentage reductions in tax liability are higher for those taxpayers in the lower income classes. The optional itemization feature, the interest and dividend exclusion, and the inventory credit are also generally progressive. The 16% credit, energy credit, and investment credit are regressive in nature; i.e., the higher income classes receive a larger percentage tax reduction than do the lower income classes for these tax credits.

Overall, the Colorado tax reductions are progressive in nature. The lowest income class had its estimated unindexed gross normal tax reduced 118.3 percent. The highest income class, \$50,000 and over, received tax reductions equal to 29.7 percent of its estimated unindexed gross normal tax.

SECTION IV. DISTRIBUTION BY SOURCE OF INCOME

The major sources of income as reported on tax returns filed in fiscal year 1982 are presented in Table IV-1. Consistent with the definition of adjusted gross income, items such as Social Security income and other transfer payments, the non-taxable portion of capital gains, and the non-taxable portion of interest and dividend income are not included in this analysis.

TABLE IV-1. DISTRIBUTION OF RESIDENT TAX RETURNS
BY MAJOR SOURCES OF INCOME, FISCAL YEAR 1982

Type of Income/loss	Number of Returns (thousands)	Percent of Returns Reporting	Colorado Income	
			Amount (millions)	Percent Dist.
Wage and Salaries	1,134.9	85.4	\$20,401.4	82.7
Net Property Income	545.1	41.0	3,535.8	14.3
Positive	466.8	35.1	4,629.0	18.8
Negative	78.3	5.9	-1,093.2	- 4.5
Business Income	176.0	13.3	857.2	3.5
Positive	116.6	8.8	1,222.7	5.0
Negative	59.4	4.5	- 365.5	- 1.5
Farm Income	40.9	3.1	- 358.4	- 1.4
Positive	18.5	1.4	140.0	0.6
Negative	22.4	1.7	- 498.4	- 2.0
Other Sources	390.0	29.3	232.2	0.9
Total	1,329.0	100.0	\$24,669.2	100.0

Wage and salary income is by far the largest component of Colorado income. It totalled \$20.4 billion and was reported on 85.4 percent of all returns. Wage and salary income grew an aggregate 29.7 percent since the fiscal year 1980 report. The average per return grew from \$15,080 to \$17,976, an increase of 19.2 percent.

Net property income consists of interest and dividends, rents, royalties, capital gains, and partnership income. It was reported on 41 percent of all returns as compared to 56.1 percent of returns reporting such income in the fiscal 1980 period. This reduction is due to the federal exclusion of interest and dividend income which pre-empted reporting of such income to Colorado. Net property income reported in fiscal 1982 grew 27 percent from fiscal 1980 despite a large component not reported due to the federal exclusion.

Business income reported on individual returns is derived from those taxpayers who are self-employed. It was reported on 13.3 percent of all returns filed. Net business income increased only 2 percent from fiscal 1980. Those returns with business losses showed losses of \$155.5 million compared to reported losses of \$365.5 million in fiscal 1980.

Farm income reported showed a dramatic shift from the last report. For returns filed during the fiscal year 1980 period, two-thirds of these returns showed a positive farm income. In the 1982 period, only 45.2 percent report a positive farm income. Total farm income dropped from \$9.1 million to a loss of \$358.4 million.

Other income is reported on 29.3 percent of all returns but accounts for less than 1 percent of total income. It consists largely of state income tax refunds for taxpayers claiming itemized deductions on the federal tax return. These refunds are modified from total income and are not taxable at the state level.

Wage income at levels of adjusted gross income up to \$100,000 constitutes 83 percent of total Colorado income. In the \$100,000 and over class, it constitutes only 43.6 percent. Net property income was a larger component of income for taxpayers with adjusted gross incomes greater than \$50,000. For these income levels it accounted for 27.3 percent of the total Colorado income compared to 11.2 percent for all other income levels. The reader interested in a more detailed analysis of sources of income should consult Tables 19, 20, and 21 in Section VI.

SECTION V. DISTRIBUTION BY MAJOR GEOGRAPHIC REGION

Data concerning the distribution of Colorado resident taxpayers and adjusted gross income by geographical region are shown in Table V-1. The 13 major planning regions as designated by the Colorado Department of Local Affairs were used. An additional region was utilized in this study, which is defined as full year residents with an out-of-state address and part year residents who left the state during 1981. The remainder of these regions are defined as follows:

<u>Region Number</u>	<u>Name of Region</u>	<u>Counties</u>
1	South Platte Valley	Logan, Morgan, Phillips, Sedgwick, Washington, Yuma
2	Northern Front Range	Larimer, Weld
3	Denver Metropolitan	Adams, Arapahoe, Boulder, Clear Creek, Denver, Douglas, Gilpin, Jefferson
4	Pikes Peak	El Paso, Park, Teller
5	High Plains	Cheyenne, Elbert, Kit Carson, Lincoln
6	Lower Arkansas Valley	Baca, Bent, Crowley, Kiowa, Otero, Prowers
7	Spanish Peaks	Huerfano, Las Animas, Pueblo
8	San Luis Valley	Alamosa, Conejos, Costilla, Mineral, Rio Grande, Saguache
9	San Juan Basin	Archuleta, Dolores, La Plata, Montezuma, San Juan
10	Black Canyon	Delta, Gunnison, Hinsdale, Montrose, Ouray, San Miquel
11	Plateau	Garfield, Mesa, Moffat, Rio Blanco
12	Northern Mountain	Eagle, Grand, Jackson, Pitkin, Routt, Summit
13	Upper Arkansas Valley	Chaffee, Custer, Fremont, Lake

The Denver Metropolitan, Northern Mountain, and Plateau regions retained their top rankings in average adjusted gross income from 1979 to 1981.

The largest percentage gain in average adjusted gross income was registered in the San Luis Valley region, a long standing low income region, which experienced a 24.2% increase. Other regions with strong gains were the Upper Arkansas Valley (23.1%), Plateau (20.8%), and Denver Metropolitan (19.6%). The Lower Arkansas Valley in southeastern Colorado continued to show the impact of poor conditions in the agricultural sector and therefore had the lowest percentage gain (9.3%) in average adjusted gross income since 1980. The Northern Front Range (12.2%), South Platte Valley (12.9%), San Juan Basin (13.0%) and Northern Mountain (13.3%) regions also showed low rates of growth. The latter region, though, managed to maintain its overall high ranking.

Patterns of income distribution within the regions differ as one would expect. The Northern Mountain region had the lowest percentage of returns under \$5,000 and ranked midway in percentage of returns with adjusted gross income greater than \$25,000. As one might expect, the percentage of returns under \$5,000 and over \$25,000 provides a good indication of overall ranking.

Table V-2 shows the rank order of the regions based on number of returns filed.

a/ "Colorado Income" differs from Colorado adjusted gross income due to: 1) Federal adjustments as sick pay; 2) Colorado modifications such as tax exempt interest; and 3) the treatment of negative income as zero for Colorado adjusted gross income.

b/ Property income consists of interest, dividends, capital gains, rents, royalties, annuities and pension income; and partnership income.

APPENDIX A. NUMBER AND TYPE OF RETURNS

This appendix provides a quick synopsis of the Colorado income tax structure. Table A-1 provides a summary of the number of returns, adjusted gross income, and net normal tax liability classified by residence status, filing status, type of return, and taxable status.

With respect to filing status (single, joint or married separate), although roughly equal numbers of married taxpayers file joint returns and separate returns, the latter account for a much greater income share. This is because both spouses have income. Married couples filing a joint return generally have only one spouse with income. It is generally advantageous for a married couple to file separate returns if each has income during the year. For purposes of this study, such returns are merged or combined and treated as a household.

In the prior studies, students filing a tax return were eliminated from the analysis to avoid "double counting" as they were also claimed as exemptions on their parents' tax returns. In this study, there was no method of identifying a student. Students could not be excluded from this analysis and the number of returns is therefore higher when compared to prior studies. (For the interested reader, the 1980 Statistics of Income report showed 1,229,278 resident returns. Adding the excluded returns for students, 1,296,558 resident returns were filed during fiscal year 1980. This compares to the 1,329,037 resident returns filed during fiscal year 1982. This is a growth of 2.5% for fiscal year 1980).

TABLE V-1. DISTRIBUTION OF RESIDENT TAX RETURNS BY MAJOR PLANNING REGION
FISCAL YEAR 1982

Total	100.0	100.0	100.0

The Denver Metropolitan region had the largest increase growing from 55.9 percent of returns filed in fiscal year 1980 to 57.7 percent in fiscal year 1982. This shows the continued attraction of the region as the economic focal point of Colorado. The only other region showing a positive change of more than one-tenth of one percent was the Plateau region which grew from 4.1 percent of the returns filed in fiscal year 1980 to 4.3 percent in fiscal year 1982. This reflected the increased number of workers migrating to the region to work in the energy and energy supporting industries. The Spanish Peaks region had a large decrease from 4.9 percent to 4.3 percent. The national recession and its impact on the steel industry certainly made its impact in this region.

For more detailed data on regional, county, and city distributions of income, see tables 22 through 27 in Section VI Detailed Statistics of Income.

Appendix Table A-1. Colorado Tax Returns Classified
By Type of Return and Residence
Fiscal year 1982

	<u>Households</u>		<u>Adjusted Gross Income</u>		<u>Net Normal Tax Liability</u>	
	<u>Number</u>	<u>Percent</u>	<u>Amount (millions)</u>	<u>Percent</u>	<u>Amount (millions)</u>	<u>Percent</u>
<u>Total Returns</u>	1,357,483	100.0	\$ 24,118	100.0	\$ 477.2	100.0
<u>Residence Status</u>						
Full-year	1,249,638	92.1	\$ 23,152	96.0	\$ 457.5	95.9
Part-year	79,399	5.8	767	3.2	14.9	3.1
Non-resident	28,446	2.1	199	0.8	4.8	1.0

Nontaxable	239,155	18.0	581	2.4	-	-

APPENDIX B. DESCRIPTION AND LIMITATIONS OF STATISTICAL SAMPLE

The study was based on a sample of 1981 tax returns filed during fiscal year 1982. This appendix describes the sampling program and indicates the statistical reliability of the sample

This study has focused on the distribution of income and tax liability by income class and major planning region of the state. Therefore, a stratified sample was designed consisting of 13 income strata and 14 geographic regions. The 14 geographic regions include the 13 planning regions used by the Colorado Department of Local Affairs and an additional region which can be further subcategorized to include (1) nonresidents and (2) part year and full year residents with out of state addresses.

The total sample size was 23,320 returns or 1.7 percent of the universe of Colorado tax returns Table B-1 presents the sample size and estimated number of returns in the universe and the statistical reliability of adjusted gross income and normal tax by income class. For example, the sampling error, (expressed in terms of the standard error of the mean divided by the mean), on adjusted gross income for the \$25,000 to \$35,000 stratum was 36/100 of one percent. The implications of this accuracy level are that the chances are 95 out of 100 that the sample value for total adjusted gross income for this stratum, which was \$4,988 million, would not differ from the true value obtained from a complete census of all returns by more than 71/100 of one percent in either direction.

Table B-2 presents the sample size and estimated number of returns in the universe and the statistical reliability of adjusted gross income and normal tax by the 13 major planning regions and for out-of-state returns.

The overall sample reliability was 17/100 of one percent for adjusted gross income and 22/100 of one percent for net normal tax.

Overall Sampling Reliability

Another indication of the overall reliability of the sample estimates is the comparison of estimates of adjusted gross income and normal tax liability with subsequently compiled Department of Revenue data. The sample estimates for both items come within one percent of the published figures. It should be noted that the Department of Revenue personnel transcribed the data from the tax returns and a series of many programmed computer data checks eliminated computational and tabulating errors. It is believed that the quality of the survey data would not have been improved if based on a complete census of returns.

TABLE B-1. STATISTICAL RELIABILITY OF THE COLORADO INDIVIDUAL INCOME TAX SAMPLE
BY ADJUSTED GROSS INCOME CLASSES

Adjusted Gross Income Classes	Number in Sample	Number of Returns	Adjusted Gross Income		Net Normal Tax Liability	
			Dollar Amount (\$000)	Sampling Error (Percent)	Dollar Amount (\$000)	Sampling Error (Percent)
Under \$3,000	1,830	239,597	\$ 284,031	2.57	\$ 737	6.66
\$ 3,000 to \$ 5,000	630	114,661	453,882	1.21	2,988	3.38
\$ 5,000 to \$ 10,000	1,795	224,347	1,654,460	0.48	18,635	0.79
\$ 10,000 to \$ 15,000	1,865	179,918	2,240,240	0.67	34,513	1.90
\$ 15,000 to \$ 20,000	1,972	140,729	2,448,628	0.66	43,921	1.04
\$ 20,000 to \$ 25,000	2,126	117,743	2,645,763	0.18	51,394	0.07
\$ 25,000 to \$ 35,000	3,611	169,033	4,987,810	0.36	103,289	0.72
\$ 35,000 to \$ 50,000	2,961	113,490	4,668,401	0.95	104,537	1.01
\$ 50,000 to \$100,000	2,157	49,319	3,129,374	1.06	78,742	0.78
\$100,000 and over	4,373	8,646	1,605,382	1.23	38,452	1.19
Total or average	23,320	1,357,483	\$24,117,971	0.17	477,208	0.22

TABLE B-2. STATISTICAL RELIABILITY OF THE COLORADO INDIVIDUAL INCOME TAX SAMPLE
BY MAJOR PLANNING REGION

Major Planning Regions	Number in Sample	Estimated Number and Dollar Amounts				
		Number of Returns	Adjusted Gross Income		Net Normal Tax Liability	
			Dollar Amount (\$000)	Sampling Error (Percent)	Dollar Amount (\$000)	Sampling Error (Percent)
1 - South Platte Valley	813	27,044	\$ 408,981	1.04	\$ 7,324	4.77
2 - Northern Front Range	2,078	108,698	1,756,126	0.87	31,263	1.50
3 - Denver Metropolitan	6,833	766,404	15,327,634	0.26	314,565	0.23
4 - Pikes Peak	1,456	117,145	1,909,122	0.60	34,615	2.27
5 - High Plains	1,297	8,512	130,319	2.55	2,307	3.81
6 - Lower Arkansas Valley	774	19,422	239,989	2.52	4,167	1.89
7 - Spanish Peaks	1,450	57,019	852,435	1.16	16,375	1.42
8 - San Luis Valley	980	13,935	172,868	2.38	2,971	4.06
9 - San Juan Basin	885	19,222	266,823	2.17	4,706	4.38
10 - Black Canyon	1,396	24,229	336,653	1.97	5,877	2.46
11 - Plateau	1,717	57,434	1,002,306	1.07	19,655	1.90
12 - Northern Mountain	1,008	29,459	527,079	0.75	9,841	1.24
