## *From the Editor...*

This issue of the *Denver Law Journal* represents a departure from our usual publication policy. In order that we might publish a recent Symposium on Science/Technology and the Law, which was held at the University of Denver, the *Journal* suspended our normal editorial process to allow us to present the views of the contributors to the Symposium substantially unedited, as they requested.

The contributors, acknowledged experts in law, sociology, and the physical sciences, met in Denver to discuss the role of the law and law Schools in meeting the exigencies presented by this country's technological and scientific activity. Because of the diverse possibilities of problem identification and suggested solutions, this Symposium issue could not and should not be an attempt by the *Journal* Association to circumscribe in style or organization the thoughts of these renown contributors.

We of the *Journal* believe that if the problems raised in this Symposium are to be soluble, conferences such as the one reported herein must be encouraged, and the results of these conferences disseminated to the professional and layman alike for their consideration.

*Michael D. Goldner*  
*Editor-in-Chief*
